SUMMARY

Product-minded engineer (B.Tech IT, 2026) who builds and ships products end to end with Python, Flask, PostgreSQL, REST APIs, JavaScript, HTML and CSS. I take projects from idea to deployed app, debug live-data systems to root cause, and document what I build. Experience spans web applications, machine learning apps, IoT and hardware projects, and an IEEE-published research paper. Building a freelance practice in web development and machine learning. Looking to own features from idea to impact and to iterate directly with users.

EDUCATION

Bachelor of Technology (B.Tech) in Information Technology *2022 – 2026*

Shadan Women's College of Engineering & Technology, Hyderabad | Affiliated to JNTUH | CGPA: 7.4 / 10

Intermediate (Class XII) *2022*

SPR Junior College | Percentage: 85%

Secondary School Certificate (SSC, Class X) *2020*

Holy Soofia High School | Percentage: 100%

PROJECTS

Dynamic Evacuation Cloud — real-time disaster evacuation platform *Sept 2025 – Feb 2026*

B.Tech final year major project | Team of 3 | Guided by Asst. Prof. Rubeena Afsar, Dept. of IT

- Co-built the full platform (Flask, PostgreSQL, REST APIs) combining live hazard, weather and traffic feeds across 625 sq. km of the Hyderabad metropolitan area.
- Owned the routing backend, which recalculates routes from multiple live sources in under 5 seconds per request; debugged data-integration failures to root cause.
- Built the user-profiling module to support multi-user sessions.
- Wrote the system architecture documentation, a literature survey of 15+ peer-reviewed papers, and a benchmarking analysis against alternative systems.

Human Following Robot — autonomous hardware project *Group project*

Arduino | Motor driver | Infrared sensors | Ultrasonic sensors

- Developed an autonomous robot that follows human hand movements, working in a team on circuit design, Arduino programming and hardware integration.
- Integrated an Arduino microcontroller with a motor driver, infrared sensors and ultrasonic sensors, along with supporting hardware components, to detect the hand and respond in real time.

DiabeticCare — ML diabetes risk prediction app *Individual project*

Built and deployed on Replit using prompt-based, AI-assisted development

- Independently built and deployed a Python-based diabetes risk prediction app, taking it from idea to a live product using Replit prompt-based development.

AI Healthcare App *Individual project*

Built and deployed on Replit using prompt-based, AI-assisted development

- Independently built an AI-powered healthcare application, using Replit prompt-based development to go from idea to a working app.

Predicting Disaster Occurrence and Impact Using AI *IEEE EarthSense Conference 2025*

Group research project | Published and presented

- Co-authored and presented a research paper predicting natural disaster patterns from historical data using Python and Google Colab.

FREELANCE EXPERIENCE

Freelance Developer — Invoice Automation & Document Pipelines *Independent*

- Built automated invoice-processing and document pipelines for independent freelance work.

EXPERIENCE

Robotics Intern (Project-Based) — Eduexpose, Remote *Apr 2023 – Jun 2023*

- Built automation in Python for hardware control and system integration.
- Built a temperature and humidity monitoring app and fixed real-time data sync issues in Firebase.
- Delivered IoT dashboards on the ThingSpeak cloud platform, with documentation for stakeholders.

SKILLS

Programming languages: Python, SQL, JavaScript, C, C++

Frontend: HTML, CSS, JavaScript

Backend & databases: Flask, REST APIs, PostgreSQL, MySQL

Tools & platforms: Git/GitHub, Firebase, Replit (prompt-based AI development), Google Colab, Tableau, ThingSpeak

Hardware & IoT: Arduino, motor drivers, infrared and ultrasonic sensors, IoT integration

Also: Technical documentation, literature surveys, root-cause debugging

ACHIEVEMENTS

- Presenter, IEEE EarthSense Conference 2025, presenting the research paper "Predicting Disaster Occurrence and Impact Using AI".
- Co-authored a published research paper on predicting natural disaster patterns using Python and machine learning.
- Completed the Robotics & IoT project internship at Eduexpose and received an internship certificate.
- Participated in the Web Development Workshop at Technovation.
- Poster Presentation at Techthon.
- Scored 100% in SSC (Class X), 2020.
